DASRA unavailability reasons

Cells show count (percentage of unavailable results within each result set)

	Structural-absence component 55/688 unavailable	Present-conditional abundance component 45/688 unavailable	Omnibus result 20/688 unavailable
Conditional-present fit retained a non-negligible gradient	16 (29.1%)	11 (24.4%)	
No DASRA component formed			20 (100.0%)
Structural-absence nuisance fit was not optimal	18 (32.7%)		
Structural-absence fit remained on a parameter boundary	16 (29.1%)		
Conditional-present fit had non-positive information		12 (26.7%)	
Conditional-present root refinement did not close		11 (24.4%)	
Conditional-present root refinement did not improve the objective		8 (17.8%)	
Positive-count model design was rank deficient	2 (3.6%)	2 (4.4%)	
Structural-absence inference derivative was unstable	3 (5.5%)		
Conditional-present fit did not converge		1 (2.2%)
